

Capital Plan & Break-Even Timeline

Phase 1 – Naqi + Detroit Pilot (Current Raise)

Total Raise: \$2.75M

This round funds the build-out of the Detroit pilot and the Naqi VR experience so we can validate the model, generate traction, and prepare for the flagship raise.

Use of Funds (high level):

- **Detroit Pilot Launch – ~\$2.45M**
 - Short-term venue build-out & design
 - Training rooms, spectator space, basic Feast Field & bar experience
 - Core smart equipment, safety gear, and scoring systems
 - Staffing, operations, insurance, permits, and initial marketing
- **Naqi Development – ~\$300K**
 - Unity game development & QA
 - Wearable integration and networking
 - Cinematic teaser / game trailer
 - Playtesting and early content capture
- **Contingency & Ops Buffer – ~\$50K**
 - Unexpected costs
 - Extra runway for iterations and refinements

The Detroit pilot is designed to:

1. Prove demand,
2. Capture data and media, and

3. De-risk the larger Atlanta flagship build.

Phase 2 – Atlanta Flagship (Future Raise)

Total Capital Required: \$49.8M

As outlined in the full business plan, the flagship DOKO Battlefield arena in Atlanta requires **\$49.8M** to build and launch at scale. This covers:

- Land acquisition & site development
- Facility construction & interiors
- Tech infrastructure, smart wearables, and Naqi arena build-out
- Restaurants, bar, Feast Field, and event spaces
- Launch marketing, licenses, and contingency

Break-Even & Profitability Timeline (Flagship Atlanta)

Once the **flagship** is funded and under construction, we model the following timeline:

Stage	Milestone	Timeframe (from flagship funding)
Planning & Final Funding	Complete fundraising, finalize architecture & design	Months 1–6
Construction Phase	Build-out of facility	Months 7–18
Tech + Interior Integration	Install systems, wearables, testing	Months 16–20
Soft Launch & Marketing	Preview events, influencers, partners	Months 20–21
Grand Opening	Doors open to the public	Month 22 (Year 2)
Ramp-Up Period	Memberships grow, events increase	Months 22–34

Break-Even Point Operational costs covered by revenue ~Months 34–36

Profitability Begins Consistent net-positive cash flow ~Month 36+

Key assumptions:

- Activity rooms and restaurants operate at **60–70% capacity** during Year 1 post-launch
 - Membership base reaches **2,000+ members** within 12 months
 - Event rentals, partnerships, media, merch, and café/bar drive strong secondary revenue
-

Summary

- **Current raise (\$2.75M)** = Naqi + Detroit pilot to prove the model and build traction.
- **Flagship raise (\$49.8M)** = Full Atlanta arena build-out with a projected **break-even in ~2.5–3 years** from flagship opening and profitability shortly after, assuming steady growth and a strong launch.
